ACHIEVEMENTS

- Anonymous reviewer on the sole author manuscript “*Controlling motile disclinations ...*” stated: “*This is an extremely interesting outcome as it represents an easy and practical way to control defects motion, a long-standing open problem in liquid crystals. The manuscript is very well-written and the results discussed are robust. These are based on a well-established liquid crystal theory (namely the Beris-Edwards one) intelligently coupled with a stochastic method in order to capture fluctuating dynamics in dry (or with no momentum-conserving) systems. The connection with experiments is well documented and is also clearly supported by the mapping between simulation parameters and real units. The main article is clear and accessible. Therefore, I strongly support the publication of the manuscript in the actual form.*”
- Prof.N.M.Abukhdeir (University of Waterloo, Canada) wrote in TOPICAL REVIEW IN LIQUID CRYSTALS on the sole author manuscript “*Stochastic kinetics reveal ...*” highlighting, “*Recently, Bhattacharjee have applied the stochastic nematic dynamics model to study homogeneous nucleation of an isotropic nematic transition. This study provides significant insight into the deviation of anisotropic fluids from the predictions of classical nucleation theory for nucleation rate and critical droplet size resulting from the presence of nematic elasticity and anisotropic interfacial tension.*” Later, NewsRX, USA highlighted in SCIENCE LETTER, FEB.2017, “*Researchers from Indian Institute of Science Report Findings in Science*”.

- Anonymous Editor elected me as a reviewer of journal **Soft Matter (RSC)** after having very positive response from both reviewers on the sole author manuscript “*Stress-microstructure relation ...*”. I’m also invited as a faculty proposal reviewer of Netherlands Organization for Scientific Research (NWO) for this contribution.
- Manuscript entitled “*Low Mach Number ...*” is selected for the prestigious **Francois-Naftali-Frenkiel award** by the Editorial board of the journal **Physics of Fluids**. Later, J.Chao, USA highlighted in **PHYS.ORG**, “*Mathematicians model fluids at the mesoscale*”.
